BILLING CODE 3410-34-P

NUCLEAR REGULATORY COMMISSION

10 CFR Part 71

RIN 3150-AF58

Fissile Material Shipments and Exemptions

AGENCY: Nuclear Regulatory Commission.

ACTION: Final rule.

SUMMARY: The Nuclear Regulatory Commission (NRC) is amending its regulations regarding the shipment of exempt quantities of fissile material and the shipment of fissile material under a general license. This emergency final rule restricts the use of beryllium and other special moderating materials (i.e., graphite and deuterium) in the shipment of fissile materials and consigns quantity limits on fissile exempt shipments. These amendments are necessary to correct a recently discovered defect in the current regulations which could permit, in special circumstances, nuclear criticality to occur in shipments of fissile materials which are permitted to take place without specific Commission approval. The regulatory defect is not indicative of unsafe fissile material shipments in the past. Rather, it was identified by Babcock & Wilcox (B&W) during preparation for shipment of an unprecedented type of fissile material that could result in nuclear criticality under current requirements. This unique material is produced as a waste product from processing of strategic material resulting from operations to commercially downblend weapons-usable fissile material from the former Soviet Union. Although this rule is being issued as an immediately effective final rule, the Commission is requesting public comment and will revise the rule if necessary.
